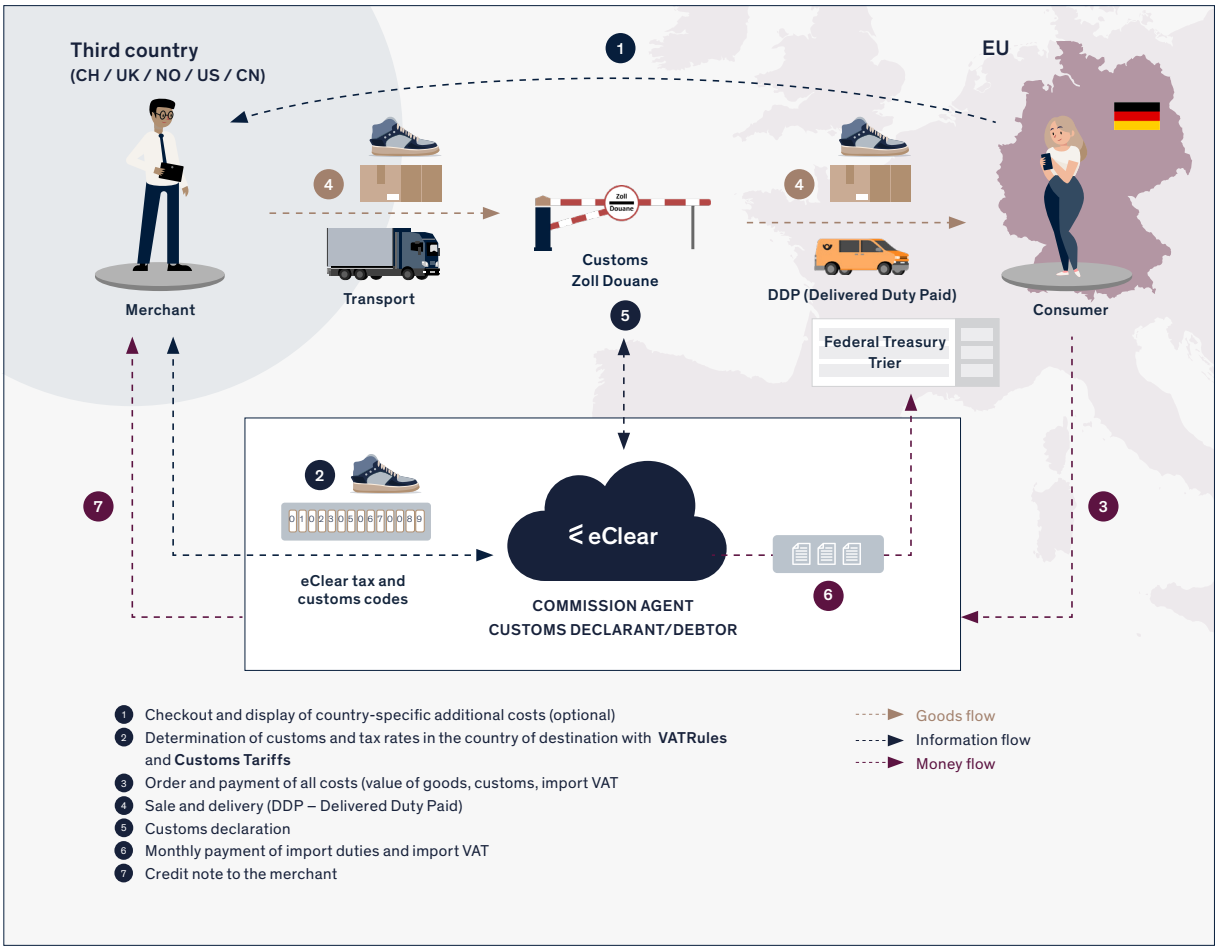
DeClear
Borderless E-Commerce from the World to Europe

DeClear – Full-service B2C customs clearing

The DeClear e-commerce customs solution enables online merchants to sell their goods across borders into other countries without customs formalities or risks. Everything from the classification of goods and payment options, to customs and tax registration is included in one solution.
Integrating DeClear into your system environment enables consumers to see the import duties and fees of the country of destination in the shopping basket – in the chosen currency and in real time. Payment processing is handled automatically by the integrated payment module. Cross-border delivery is thus free domicile duty paid.
Neither the merchant nor the customers are involved in customs formalities.

How eClear works



Certified expertise

"Our DeClear solution offers online merchants and marketplaces limitless growth potential. You grow your business, we take care of the rest – without risk!"
